

ABSTRACT

A system and method of controlling the delivery of an incoming call directed to a wireless communication device is provided. When an incoming call directed to the wireless communication device is received, the location of the wireless communication device, to which the incoming call is destined, is determined. If the wireless communication device is not within a designated zone, the incoming call is directed to the wireless communication device. If the wireless communication device is in a designated zone, the incoming call is handled based on specified criteria.
